

Go-Live Checklist

Tick every box before first payroll, first leave approval, first overtime approval, and first review cycle.

Tenant / Organisation:

Prepared by:

Date:

Section 1 — Before your first Payroll Run

Complete every row before you press 'Run payroll'. Half-configured pay items are the #1 cause of payslip errors.

☐ Organisation profile complete (legal name, ABN/tax ID, country, currency)	
☐ Pay calendar set: frequency, period start, pay date offset, bank cut-off time	
☐ All earnings pay items created with correct tax treatment	
☐ All deduction pay items created (pre-tax, post-tax, garnishments)	
☐ Allowance items configured with correct STP categories	
☐ Tax rules / tax tables loaded for current financial year	
☐ Super / retirement fund defaults set and SG rate confirmed	
☐ Award classifications and rate tables imported and dated	
☐ Overtime and penalty rate multipliers configured	
☐ Public holiday calendar imported for the right region	
☐ Bank file format selected and test file validated	
☐ All employees have bank, super, TFN/tax ID, contract type	
☐ Dry-run payroll completed; variance report reviewed line by line	
☐ Two-person approval (maker/checker) enabled on payroll runs	
☐ Payroll Officer + Org Admin both signed off on the dry run	

Section 2 — Before approving Leave Requests

Leave approval depends on accurate balances, accrual rules, and a manager hierarchy.

☐	Leave types created (annual, sick, parental, unpaid, study, bereavement)	
☐	Accrual rule per leave type configured	
☐	Opening balances loaded for every active employee	
☐	Public holidays linked to the right branches	
☐	Reporting line set for every employee	
☐	Delegation rules configured for managers on planned leave	
☐	Leave policy document uploaded to Knowledge Hub and acknowledged	
☐	Notification preferences confirmed	
☐	First leave balance audit run — no negative or orphan balances	

Section 3 — Before approving Overtime / TOIL

Overtime requires both a calculation engine and an approval trail.

- ☐ Overtime rates created (1.5x / 2x / public holiday) per classification
- ☐ Penalty rate windows configured (weekends, evenings, night shift)
- ☐ TOIL policy: accrual cap, expiry window, cash-out rules configured
- ☐ Timesheet templates assigned to relevant employees
- ☐ Geofence / biometric clock-in active for the right sites (if used)
- ☐ Manager approval routing tested with a sample timesheet
- ☐ Overtime budget thresholds + alert recipients configured
- ☐ Pay items mapped: overtime flows into correct payroll component
- ☐ First overtime claim end-to-end test passed

Section 4 — Before launching Performance Reviews

Reviews launched without templates, cycles, or KPIs cause the most rework.

☐ Review cycle created with start/end, mid-cycle and final dates	
☐ Review template chosen and questions locked	
☐ KPI / KRA library populated for each department or designation	
☐ Rating scale agreed and documented	
☐ Calibration committee defined; calibration session scheduled	
☐ Feedback request templates configured	
☐ Notification cadence confirmed (kickoff, reminder, escalation)	
☐ Pilot review run with 3-5 employees — feedback incorporated	
☐ Communications: email to all staff explaining the cycle and timing	

Final sign-off

All four signatories acknowledge the workspace is ready for production.
